Environmental Policy

The aim of Triplan's environmental policy is to provide a statement of intent as well as serving as a guide for our staff in their daily work. The policy should also be seen as a declaration, directed to stakeholders in the company, such as customers, suppliers and authorities.

In all we do, we intend to actively care for our environment by applying the following measures:

- Regularly monitoring and assessing the environmental impact of our activities by specifying targets and follow up on them.
- Meeting the requirements of applicable legislation and regulations.
- Continuously improving our environmental performance.
- Preventing pollutants in our day-to-day activity.
- Work to reduce emissions and noise.
- Using material which is both as environmentally friendly as possible and facilitate recycling.
- Work to reduce our energy consumption.
- In any new business, ensuring the environmental impact is assessed and communicated to the customer.
- Providing our employees with training, and thereby the skills and expertise they need to perform their work duties in a way that is ecologically sound.

Nicklas Sahlsten
CEO, Triplan AB
